Welcome to Sarawak, the lush mountain kingdom across the water, overrun by terrifying monsters and ruled by the ever ruthless Baron, Rundgar. Use your skills and magical prowess to acquire the seven bowstones of power, and save the people of Sarawak from the Baron's clutches. The kingdom lies at your feet, don't let them see your fear... A Room of One's Own A Room of One's Own by Virginia Woolf is a novella, a play and a film. I read it, she read it, we all read it...and we're going to reread it, again and again and again. This tale is about the history of women in literature from the Renaissance to the present. Virginia Woolf's literary legacy is a remarkable one, of course she wrote many other novels, some excellent, some not so. This book takes a long, hard look at the novel as a whole - as art, as a medium for expressing ideas, as a vehicle for emotion and for exploring ideas. What A Room of One's Own is about is the fact that the genre of the novel is a form of expression that is uniquely male, or maybe, a form of expression that is uniquely male. Virginia Woolf argues this point. She argues that women have never had a home of their own, in the sense that only men have. And what I'm trying to tell you is that she's talking about two different eras, and what the two different eras are. Why can't we read stories about women? Because there have never been female storytellers who have had a home of their own. And there have been numerous women who have taken the task of writing, and writing a book, and writing a novel, and writing plays. But why then should women write from a place that's unattainable? And I'm not saying it's unattainable. I'm not saying it's inaccessible. I'm just saying that it's a male preserve. Women have never had a home of their own, a space that they can call their own, and write about what it's like to be female. I'm telling you, a home of one's own in the sense that Virginia means it, has never been a home for women. Cervantes, Shakespeare, Austen, Woolf, they write plays because this is the place where their art takes place. And

Q: Making a Tkinter GUI with two BUTTONS in Python I'm trying to make a simple GUI for a simple basic weather system. Just use buttons, combos, labels, et cetera, and have the underlying information stored in a tkinter Library or dictionary or whatever. My problem is I can only make one button or else the code throws some sort of error message on me. I am relatively new to Python but I'm used to Java and C#. My thought was I could make a function for each button, then call it from a parent function using button + function(var1) + function(var2) but this ended with errors. Here's what I have so far: weather = ("yes", "no", "really") def yes(): """left side"""" weathers = {"yes": "yes", "no": "no"}

Whatsapp : Email : [email protected] This may be the longest intro speech ever, and it's all to explain why we're making Maken so retro, why it's not Guilty Gear. Now, I haven't been asked anything directly about Guilty Gear (not in a few years anyway) so I had to come up with something. Basically, I'm showing off what I'm making. I want to prove that I can make this and that I can do it right. Maken is now accessible to more people because of the whole "making" thing, but then the game was meant for me to show this ability off so... This thread is to show people what RetroMak has been doing for the past 5 years, up until yesterday... Such a belabored intro... Anyway, yes, RetroMak is coming to PS4 this summer. But let me just say a word about the port: RetroMak runs very well on PS4. The controls are a bit sloppy, but it's a minor issue when you notice that your sprites are never larger than they should be, they just look a bit blurry when zooming in. Lilac

## **What's new:**

**Deluxe is the grandaddy of old-school action platform games. A game that, like the Amiga JAGS (which Mike works on) it was designed for the Amiga in the same way that Shenmue and Monkeyball were done for the PC - for a shrinking market and a sense of nostalgia. But it's still quite unique within the action genre. Mike: In 1987 Michael A. Cawley began working for Probe Inc. At the time he was pretty much the sole developer of the Amiga, and an integral part of the Probe team. They looked to him for a number of things including a solution to the 2D limitations of the hardware. He and a colleague devised a special LCD screen (the Cyberdisc) and a special controller (the Cybercave) that enabled the player to jump and do all sorts of things while holding the Cybercube in one hand. This was the genesis of the Cybercube Deluxe. There was also a German Amiga magazine called Amiga Power in the early days that had an interview with us. In the interview Michael mentioned one of the first Amiga games that ever came close to being finished. This became game one of Cybercube Deluxe when I came on board. We actually did start work on a software package called The Magic Box - a very loose cloning of the magic caper game Despin. I have a pretty strong memory of seeing some of it - but the actual code ended up being moved to CCD. There was a game called RoboCop which John Dunn and David Jones were working on around the same time. RoboCop was only released on the Amiga, early on, in 1987 or so. It was a first person shooter. We didn't do it. Instead, we did a couple of shooting games that came before Cybercube. My first game with CCD was Breakout. Breakout was essentially an early version of a Breakout clone. It released in 1988 before Cybercube. Breakout was very heavily based on Space Wars and Monopoli. For the record, Cybercube was influenced by Monopoli but the writers saw a similarity of a more subtle nature. Monopoli was set in Libya and used violence as a game mechanic - whereas in Breakout you play a version of the game set in the tropics. The humour came from the author's racist views of Africa and Africa itself. I guess that's a reactionary game. Penguin**
