A: I solved your problem with this: `if (!isset($_POST["Submit"])) { header("Location: $url"); exit; } $url = ""; if ($_GET['mode'] == 0) { include 'includes/2.php'; } elseif ($_GET['mode'] == 1) { include 'includes/1.php'; } elseif ($_GET['mode'] == 2) { header("Location: $url"); exit; } else { echo ""; include 'includes/home.html'; } ?>` So you can make the header() function inside if and else if, or just inline the header function to the end of the code. Q: How to write a recursive function with two parameters? `function fib(n, a, b) { if (n == 1) { return a; } else { return fib(n-1, a+b, b); } }` Just try to make a recursive function, two parameters of that are int and int. Can somebody give me a better solution? Thank you very much! A: `function fib(n) { var a,b,c; a=b=1; if(n>1){ c=a+b; b=b+c; a=a+b; return fib(n-1); } return a+b; }` Blast-related public health problems: a case study in New Zealand 6d1f23a050
