"The Medvedev-Spiegel event in the European Union has taught us that Washington does not understand the conditions of the new era. This is the moment to reconstruct the EU on the basis of the three spheres." Maksim Kovalyov, editor-in-chief of Russian news agency Izvestia, said. Just find the part of the code that it is signing us with and re-sign it with the account you want it to be signed with. That's it! Takes less than a minute, and it will remove the "change account" command from the user. Both versions of the client will download and install.

However, for the most part I believe it's only necessary to install the client on the user's computer. (Well, the executable of the server. Not the actual client. But the only thing I know that makes the program unusable is the "change account" feature. With the new released x64 version, getting it to run with the standard account is fine. And I'm pretty certain that you can sign the standard account with the existing client. So I don't think you need to use the "change account" feature if you use the x64 version. I'm not going to spend the time to figure out how to make the change account thing work, though. I figured it out, and I was able to make the program work. It doesn't happen every time I connect to the server, though. Sometimes I'll do everything right, and I'll be able to get the program to start up, and everything will work fine, and then it won't. Only when I start the server first, and then let the client run first, it works. This seems to be a problem with running the client first, though. "The client is a client, and the server is a server. They do not have the same purpose. The purpose of the client is to make everything work. The purpose of the server is to provide access to data. They can not be used interchangeably." That's basically what he means by using the server first. He's saying that the program should start the server first, and then let the client program run. But I don't think it's possible to tell the client to run first, though. I think only
