Windows®, (Explorer.1. Field of the Invention The present invention relates generally to spring operated mechanisms for actuating the control handle of a leak proof engine stop valve for a diesel engine of a motor vehicle and more particularly to an improved structure of such a spring operated mechanism to provide an improved force bearing and force transfer on the control handle. 2. Description of the Prior Art A typical motor vehicle engine usually has a stop or a control valve (i.e., engine stop valve) to be actuated by a spring to be inserted into its outlet passage for stopping the engine. In prior art, the engine stop valve is usually actuated by a spring biasing it in one direction against a spring biasing force supplied by a controller and it is released when the force acting on the control handle thereof is in the opposite direction to the biasing force of the spring. In the operation of such a spring operated mechanism, a force bearing point is provided at the control handle, while a force transfer point is provided at the spring. The two points make a right angle therebetween so that the force acting on the control handle is transferred to the spring. As is usually known, the quantity of the spring force 6d1f23a050
