Download it now to continue. Click here to download the latest version for free.

Actual Size download XP-460B Driver Download.Q: Controlling Refluxjs Subscriber via a Javascript Function I'm currently using refluxjs to build my app. In a parent component, I have a template that utilizes the master role.master.child event in order to dynamically create child components that include a form that should only appear if there is a master record available for that child component. This form will have an instance of a refluxjs Flux Subscriber in it's controller. This subscriber will persist the submitted data by way of an action in that particular form's store. I have already setup an action in the store. The refluxjs event handler looks like this, this.closeForm = function () { var rootState = this.state.rootState; rootState.masterRole.subscription.dispose(); }; In my view, I have the following method, onCloseForm(e) { this.closeForm(); var formId = e.id; var formInstance = this.refs.form.instance; formInstance.subscribe("rootState.masterRole.child", function (result) { formInstance.reset(); this.refs.dataForm.refs.dataForm.setState({ 6d1f23a050
