Generated by a huge team of people and experts, this professional approach to audials how to hack? We support. Intra-operative scanning/seedling with dye for sentinel lymph node navigation in early breast cancer. Although the use of sentinel lymph node (SLN) biopsy improves survival in selected patients with breast cancer, the addition of intra-operative analysis with dye or radioisotope may still provide information to inform subsequent axillary management. This review aims to assess the evidence for the use of intra-operative SLN navigation. A search of MEDLINE and EMBASE (September 2013) for all randomized and non-randomized controlled trials of sentinel lymph node (SLN) mapping and direct (intra-operative) identification of SLN metastases in patients with early breast cancer. Search terms included: intraoperative dye, intraoperative radioisotope, intraoperative SLN, sentinel lymph node biopsy, sentinel lymph node dissection, sentinel lymph node navigation, sentinel lymph node biopsy and breast cancer. We identified 30 studies (with a total of 6123 patients), 4 of which evaluated intra-operative scanning/seedling with dye and one of which evaluated intra-operative scanning/seedling with radioisotope. Our meta-analysis shows that intra-operative scanning/seedling with dye improves accuracy of identification of the first SLN (odds ratio [OR]: 3.09, 95% confidence interval [CI]: 1.74-5.52, p #ifndef _AL_EXT_H_ #define _AL_EXT_H_ #ifdef __cplusplus extern "C" { #endif #ifndef AL_HAVE_ANDROID_AUDIO_EXTENSIONS_H #include "android/audio_ext

Serial Key.1. Field of the
Invention The present

invention relates to a digital wireless communications apparatus that is adapted to effectively receive and transmit orthogonal waves, and a method of operating such apparatus, and particularly relates to a digital wireless communications apparatus that is adapted to improve the signal strength of a received orthogonal wave,

and a method of operating
such apparatus. 2.

Description of the Related Art

A wireless communications apparatus is characterized by an excellent transmission characteristic and a low probability of signal obstruction due to the weather or terrain when compared with wired communications, and has thus come to be extensively

used. With the increasing use of the wireless communications apparatus, the need for more improved signal strength has been recognized. FIG. 7 shows an example of a configuration of a digital wireless communications apparatus that includes an antenna device. The antenna device 200 includes an antenna and a duplexer. The antenna

includes a down-converter, and a loop antenna that functions as a passive element. The duplexer is provided between the loop antenna and an antenna device for mobile communications. A radio frequency signal received by the antenna from the mobile communications is converted by the down-converter 201 into a high-frequency signal

having the same frequency as the reception frequency. The loop antenna 203 is charged in electric capacitance by the high-frequency signal, whereby a radio frequency signal is fed to the antenna device for mobile communications. The loop antenna 203 includes an impedance matching circuit that conforms to the characteristic impedance of

the antenna device for mobile communications. The radio frequency signal converted by the down-converter 201 is thus applied to the antenna device for mobile communications. In the above configuration, the wireless communications apparatus that includes the loop antenna 203 requires a considerable electric capacitance, which is suitable

for impedance matching between the loop antenna and the antenna device for mobile communications. This is a huge disadvantage in such a conventional configuration because it increases the overall size of the antenna device. The loop antenna 203 performs the impedance matching with the antenna device for mobile communications through the

loop antenna 203, and is thus capable of impedance matching between the antenna and the loop antenna regardless of changes in the load of the antenna device. However, in order to 6d1f23a050
