XR-2007 Series Wireless Access Points (WAPs) are available in three models and. specify which version of the firmware file to be used for each.... Launch the Wireless Setting Setup Wizard (MSI) wizard, click Next. 1. Field of the Invention The present invention relates to an exposure apparatus, an exposure method, and a semiconductor device manufacturing method, which project a pattern image onto a substrate and expose the substrate to light, thereby manufacturing a semiconductor device. 2. Description of the Related Art Generally, in a lithography technique, a pattern formed on a reticle (a photo mask, in which a circuit pattern is formed) is projected and transferred onto a photosensitive substrate (a semiconductor wafer) by the so-called exposure apparatus, and the exposure apparatus is used to form a pattern image of a circuit pattern onto the photosensitive substrate. However, since the projection lens of the exposure apparatus has a finite resolution, the pattern image formed on the photosensitive substrate is occasionally deformed. Recently, in order to form a fine pattern image on the photosensitive substrate, it has been conventionally proposed that the pattern image formed on the photosensitive substrate be deformed by bending the substrate itself, without using the projection lens. For example, Japanese Patent Laid-Open No. 2004-126914 discloses an exposure method for forming a pattern image of a device pattern (a diffraction pattern of a mask pattern) on a semiconductor wafer by using a second exposure apparatus, and concurrently transferring the pattern image of the device pattern to a predetermined portion of the semiconductor wafer by using a first exposure apparatus. This exposure method is advantageous over a conventional exposure method in that it can control the position of a displacement of a transfer position of a pattern image of a device pattern, by imparting to the semiconductor wafer a predetermined amount of mechanical deformation in the exposure method. Conventionally, in a conventional exposure apparatus, when the semiconductor wafer is mechanically deformed, the wafer is held on a stage by using a chuck or a vacuum chucking mechanism. I'm gonna do what I wanna do, when I wanna do it I'm gonna do what I wanna do, when I wanna do it (Hook: Chorus: Todd Edwards) Uh, you're a late bloomer, you're an underground artist, you got a different beat
