When I have used visual studio 2010 before, my project references show up in the 'Add Reference' window but when I go to a new project with VS 2013, all of them are missing. Is there any way I can get them back and why doesn't it happen in VS 2010. A: Check the .Net version of your VS. C# projects use .Net 4.5 or 4.0. Project Settings > General > Application > Target Framework Ensure that you have the right Windows SDK and/or .Net Framework. Update: Change the configuration to Any CPU from x86 to see if your runtime changes. A: It may be an issue with the .NET Framework version that the project's references are using. To check this, you could open up the project's properties and look at its runtime. Right click on the project, select the Properties page and open the Application tab: The Runtime section looks something like this: Make sure that the .NET Framework version it is targeting is at least the latest version listed there.
