The drive contains metal parts that remain hot even after being driven . For commissioning via PC, install VLTÂ® Motion Control Tool MCT Setup 10. After the drive unit is actuated, the maximum number of cycles will be written to the device. To reduce this number of cycles, after a drive cycle has been performed, the drive can be disabled using a switch on the drive. The switch to disable the drive can be configured using the VLTÂ® Motion Tool. The motor control unit (MCT) can be used to control and regulate variable cycle drives.
