That's what I wrote below:"For a twitter clone, a few tools can be used:1. RSS reader: Google reader, feed reader, etc.2. Stats: Google analytics, MixPanel, etc. (for API)3. Web server: lighttpd, XAMP, etc.4. Database: MySQL, PostgreSQL, etc.5. Search engine: Google, Twitter Search API, etc.6. Usernames: generate usernames, password generation (i.e. strong hashing), etc.7. Web-site: WordPress, Joomla, etc.8. Forum: yapc, phpbb3, etc.9. Discussion board: Discourse.10. E-mail: sendmail, PHP Mailer.All in all, there are more tools that could be used to build a twitter clone. A perfect twitter clone would need a list of all those tools and the reasons why each of them could be used. I would also like a list of the best twitter clone frameworks for PHP. If you can add more tools to this list that will be greatly appreciated." =====
