
Advanced Laparoscopic Surgery

Download

Laparoscopy is a surgical procedure in which a thin light-transmitting instrument, a laparoscope, is used to examine the pelvic organs and performing surgical operations. Laparoscopy is the most accurate diagnostic method, and in many cases it can be more effective than ultrasound or computed tomography. Laparoscopy is used to diagnose and/or treat the following diseases and conditions:

1. Crohn's disease
2. Hemorrhoids
3. Tumors of the intestine
4. Endometriosis
5. Benign tumors
6. Ovarian cyst
7. Ovarian cancer
8. Endometrial cancer
9. Uterine cancer
10. Cancer of the vagina
11. Cancer of the body of the uterus
12. Cervical cancer
13. Breast Cancer
