

Extra Quality Crack Palisade Decision Tools 6.3 76

evolver can read and write excel data, so if you have excel data somewhere, it can train a regression model, you define the regression model through the regression model manager, you can also write your own regression model, similar to writing a decision tree, the excel idk documentation explains this process, for example, suppose you want to find the best sales rep, the most straight forward way to do that is to sort your people in reverse rank order and select the top-ranked person, if you do that, you'll be sorting the best people in the bottom half of your group, or toward the bottom, the result will be the worst-ranked rep, there are two kinds of ranking procedures: one that ranks by many criteria and another that ranks by only one criteria, there are some packages that let you do both, for example, you can use a package like regre 2000 to calculate multiple scores simultaneously, another package is palisade, once you've trained a palisade, you can use it to combine many scores into a single number or report a single score, once you select your model, you'll be asked to select a prediction function, that can be a ranking, or as mentioned before, it can be more conventional scoring, you also decide the criteria for ranking or scoring, the scoring function is the basis for the ranking, once you've selected it, you can easily train a new model without going through the training phase, which gives you continuous ranking, you can also run a "score" to rank people as you are using them, when the new person comes in, you can compare the person to your model.

yes. each report can be done from a cell on a worksheet, from a query menu item, or from a dialog box. try clicking the dialog icon at the bottom of the dialog you want to use; this will open the dialog. please note, the dialog settings may be different than the default, depending on the type of report. for example, the analysis utilities default is to keep the data view, whereas the settings dialog defaults to using the query menu item. you can change the setting in the dialog, but if you do that, you'll lose any analysis you've done. stattools will quit each time you save your workbook, unless you turn off automatic save via the stattools options dialog. data conversion wizard is different; you don't need to turn off this feature. you can create a new data collection in the data conversion wizard, and it can then be saved as a workbook, be it externally or internally. although palisade has made data exchange between its products and visianalyst very easy, the limitations of acds are potentially serious, and users who do not have more than a handful of data files to share should seriously consider using something that can actually handle bigger data, such as visianalyst. for those who do have a lot of data or do want to be able to work with a lot of data, visianalyst is a good choice. it can handle large data sets without difficulty. visianalyst's embedded data exchange can handle hundreds of files at a time. the primary advantage of visianalyst is that it provides visual analysis without the red-tape involved in program creation. palisade's rdk is therefore a good tool for people who do not want to burden themselves with complicated programming. the rdk is optimized for rapid construction of marketing models; the projects on the database you will need to load may be rather large. visianalyst will only load the data you specify, and the resulting analysis will be a more efficient reflection of the data in the database. 5ec8ef588b
