Amazon is a new partnership between the Good Enough Cars and Amazon.com software companies. The ElSawin program may show you Amazon products in the search result, if you want to see details of the product, click it, then add to cart to see the item on Amazon. The following text will appear in the window that the Cart window is open: If you get a warning message:The [x] products could be affected by security problems and should be updated to a recent version. The two modules are:WebActivator : 5741 WebSocket : 0 (incompatible).This is because ElSawin 5.0 has an earlier version of WebActivator, which has been reported as not being compatible with Microsoft.NET 4.0. After upgrading the ElSawin 5.2 to the latest, there is no more this warning. Check your antivirus program to be sure if the software is not corrupted. Also, if you have a database and a previous version of ElSawin on the same computer, you should probably delete the database first and restart the installation if you dont want that version of the database.
