Maple 13 License.dat LINK

i've been trying to upgrade from maple 14 to maple 18 but i was advised to downgrade to maple 14 for license reasons. i've read that maple 14's license won't work with the later versions of maple. i'm still having this problem and have no solution. i've also tried to reinstall from scratch but maple doesn't seem to like that either. beginning with maple 2013a, you can use a license from the installation archive or from a backup from a previous release of maple, if your current release is licensed. applications and add-ons for the current release and earlier releases are contained in the installation archive, while add-ons for releases before the current release are installed by the previous license. beginning with maple 13, the license file also includes the system requirements file (maple-requiredfiles). as we reported in the previous release, we have also moved the license database to a shared location. this makes it easier to move from one installation to another. for more information about licensing and to learn about your options for the license you should purchase. you can purchase a software license as part of your subscription to mathworks online services. if you need a personal license for your organization, call a sales representative. matlab is a high-performance matrix computing platform that enables users to analyze and solve the mathematical problems that are at the heart of many scientific and engineering fields. matlab provides best-in-class tools for numerical analysis, signal processing, simulation, and visualization. the resulting solutions can be quickly and easily interactively explored, visualized and analyzed in-place. matlab's tools include signal processing, statistical analysis, linear and nonlinear modeling, visualization, and simulation. the programming language is vector oriented with extensive matrix, array, and string handling capabilities. matlab's comprehensive software toolbox includes functionality in the areas of numerical linear algebra, optimal control, multidimensional integration, and multivariate statistics. it also includes many language extensions for graphics, plotting, and system modeling.
