broken windows policing with implicit threat of escalation refers to the use of low-level offenses as a precursor for escalating the threat of arrest. under this strategy, the threat of escalation is implicit because the low-level offenses are not understood to be an indicator of an ongoing crime. it is also referred to as quality of life policing because low-level offenses are intended to improve the quality of life by removing potential causes of crime. the following section describes interventions that have

been incorrectly labeled as broken windows policing with implicit threat of escalation. broken windows policing with implicit threat of escalation is sometimes referred to as community policing (acharya, 2001) or local crime prevention (johansen, 1999). the goal of this strategy is to prevent crime by targeting individuals or groups who might commit a future offense. low-level offenses are used to identify a person or group to target, and the use of these offenses is intended to prevent a future offense from being committed. the following section describes interventions that have been incorrectly labeled as broken windows policing with implicit threat of escalation. broken windows policing with implicit threat of escalation is sometimes referred to as critical incident policing (gullickson, 2001). critical incident policing can also involve the use of low-level offenses to prevent future offenses from being committed. microsoft's decision to adopt typescript is in line with the company's strategy of embracing open source: the open source community has shown that it can accelerate the development of tools and language features. as a company, microsoft is very pragmatic: its strategy is to use open source as leverage to get the features that make the company more competitive. the key benefit of open source is that it's open: all of the data, source code, and community feedback are shared, which accelerates the development of the product. it's also important to remember that microsoft's adoption of typescript was motivated by its desire to support windows.

broken windows is a sociological theory and public policy reform program. it is the proposal that "the appearance of disorder (i.e., broken windows) in a neighborhood is a symptom of a larger, more serious problem that may lead to other social problems (e.g., crime, drug abuse, truancy) and even physical damage (e., fire, vandalism)." the theory proposes that the appearance of disorder in a neighborhood invites disorder. the theory claims that if the disorder is not corrected, the neighborhood may suffer more from crime and drug abuse. the broken windows theory is a theory of social control and a reform program. first, it is important to recognize that broken windows was first theorized by sociologist william ogburn in the 1920s as a policing strategy, although it was not an original idea. (ogburn suggested curb patrolling, which is not in the broken windows framework.) ogburn and his colleague robert e. park theorized that minor offenses (like broken windows) lead to

greater disorder and, in turn, to more serious crimes. this strategy was initially proposed for manhattan (park and ogburn, 1934), and it was later tested in chicago (park and mckenzie, 1938). the broken windows theory was then adopted by the federal bureau of investigation (fbi) in the 1940s as part of its strategy of broken windows, and it was a key element in the centerpiece of the 1992 nyc civilian complaint review board reforms. the broken windows theory of disorder was then popularized in the 2000s, and it has been particularly associated with rudy giuliani, who was new york citys former mayor (1994-2001). 5ec8ef588b
