Rajiv Mehta was born in Mumbai. He completed his medical degree from St. George's Medical College and his Internal Medicine training at King George's Medical University. He completed his residency at All India Institute of Medical Sciences, New Delhi. Rajiv worked in the pharmaceutical industry for a short time before joining a large academic hospital in Chicago where he participated in the development of innovative therapeutic interventions for acute coronary syndrome and heart failure. He returned to the private sector and has worked at Clea Pharmaceuticals since 2013. Dr. Mehta and his collaborators were the first to show, by a novel technique, that nucleoside analogs used in therapy could be efficiently sequestered within a living cell in the animal. These observations provided a glimpse of a new approach to treat infectious disease. In 2009, Dr. Mehta and his collaborators were the first to show, by a novel technique, that nucleoside analogs used in therapy could be efficiently sequestered within a living cell in the animal. These observations provided a glimpse of a new approach to treat infectious disease. The findings suggested that its possible to design potential drug candidates based on a hit and run methodology, which is also effective, efficient and required low overage drugs or API. Hussain, H.
