---

totalavs free antivirus is easy to install, stable, and well-designed. i liked everything about it. the interface is very user-friendly, and the installation wizard comes with an extensive set of customizable options. totalavs free antivirus is simple to use and light on the system. i particularly liked the on-demand scan mode, which automatically scans files when you open them, without making you wait. you can start the scanning process from the interface, from the command line, or using the antivirus utility. besides real-time scanning, totalav has solid scheduled scan modes, a file/folder scanner, an adaptive file security engine, and fingerprint-based malware detection. totalav also provides anti-phishing and anti-spyware protection. totalav free antivirus software offers a free cloud-based file-scanning antivirus service along with a free antivirus scanner. there is a free-trial version of the antivirus protection, so you can test its features before purchasing it. totalav is good, but it has minor issues. it may take a while for the service to load, and it doesnt come with an on-demand real-time protection feature. i would also like to see a webroot free antivirus on the mac, but youll have to wait for the mac edition. totalav free antivirus is an easy-to-use, easy-to-use antispyware and antivirus utility, and the mac edition of avira avira , which won the av-comparatives 2015 award and macworld editors choice award . like avira, totalav is light on system resources. totalav is one of the fastest anti-malware/anti-spyware/spyware applications i have ever used. and ive tested a lot of mac antivirus software on windows and linux. the only mac antivirus that can beat totalav in real-time is avira.totalav provides excellent detection rates for all types of malware, including threats to your privacy. totalav is definitely the best mac antivirus, and in terms of functionality, it's easily the best free mac antivirus i have tested.
