a webcam application, such as cheese, will enable you to take still images of your surroundings and share them with friends and family via the internet. you can take still images of your surroundings with the eee pc's built-in webcam and share them with friends and family via the internet. a webcam application, such as cheese, will enable you to take still images of your surroundings and share them with friends and family via the internet. cheese is one such application and works with the eee pc's built-in webcam. however, you can also use a webcam application with the eee pc. camorama is one such application, and it will run on the eee pc's built-in webcam. (you can download camorama here.) right now i am using a dell studio 1555 with a 1.5ghz piii, 512mb ram and 20gb hdd. i am getting along fine with that laptop, but it is a little on the heavy side. i am trying to find an alternative for my laptop. i looked at the dell studio 1555 and the dell studio 1555 looks to have a bigger hdd and better graphics with more ram, but i am still looking at the asus eee pcs and wondering if i should go that route. i am just curious to know what specs i should look for. lets see. asus eee pc 1215b. e-450 1.6ghz cpu, 8gb ram, nvidia geforce go 6150 128mb gddr3. bugs: hdd is not removable, you have to buy a new hard disk, it is a proprietary design. may be you can replace

hdd with ssd, but most likely you will have to buy a new hard disk. use standard 2,5 sata hdd for netbook. lcd screen is not backlit. hdmi and usb 2.0 ports. wifi card is broadcom bcm4306. the only good thing about this eee pc is the geforce go 6150 128mb gddr3 and ati rs480 128mb gddr3 video card, but the rest of the features are kind of lame. i wouldn't recommend this eee pc, it has too many problems.

asus eee pc motherboards come with one or two usb 2.0 ports (depending on which one of the three motherboard versions you purchase). the usb 2.0 ports provide a full-speed data throughput of up to 480mbps. however, they have a maximum transfer rate of only 100mbps. in practice, youre unlikely to use usb 2.0 ports to connect peripherals such as a printer, scanner or external hard drive. i have never found a worthwhile use for usb 2.0 ports, so i disable the usb 2.0 ports. if you have a usb 3.0 compatible external hard drive, or a usb 3.0 printer, you can connect it using a usb 3.0-to-usb 2.0 or usb 3.0 adapter. asus includes a small internal wi-fi antenna in the 1215b models. the antenna enables the eee pc to connect to a wi-fi network; however, the antenna offers only a mediocre signal strength (it works best outdoors, but will work inside a moderately sized room). therefore, unless you can use the eee pc with an external wi-fi antenna, consider leaving the internal antenna enabled. in addition to the drivers described above, asus offers a couple of more utility programs for eee pc owners. these programs offer a limited degree of control over the internal hardware of the eee pc. the asus utilities program lets you adjust a few hardware options, such as the touchpad sensitivity, backlighting, and audio volume. the asus-ui program allows you to adjust or delete

certain asus-specific application icons on the eee pc's desktop. for example, you can delete the icon for the built-in web browser or disable the wi-fi toggle button. in addition to these two programs, asus also offers a utility that lets you adjust the eee pc's keyboard backlighting. in addition to the drivers, utilities and programs described above, you can download the asus eee pc utilities (link in resources) program from asus. it includes a handful of additional features and useful tools for managing the eee pc and its components. 5ec8ef588b
