Brilliant feature to manipulate and re-arrange live images to achieve any needed effect. In one of my photoshop projects I had to deal with live images and needed the adjustment of the sharpness of the live image, which entailed using the Clarity tool to alter the sharpness, I used it in a live (a video frame) and was amazed at the results, thanks to this photo editing software and editing tool, I have no need for Photoshop in my life ever! I've been very happy with Adobe's Lightroom for a long time, but found the latest acquisition less than stellar. The main reason is that it's a disk-based program and as such it is much more susceptible to the conditions that make balky drives such as dying batteries and bad sectors manifest themselves. Add to that Lightroom's tendency to take forever to open/close, and it's a somewhat frustrating experience. In my view, Lightroom is a bit of a mixed bag. It's certainly a great tool for processing large numbers of images. Some of the features it has are great - being able to group images into albums and still easily manage them, is a great idea and it makes album making much simpler. But the UI is not as elegant as Adobe's other programs. The way the UI is set up makes it at least twice as sluggish to use as the competition. Lightroom CC is a fantastic program. I've been using it for a couple of years now, and in that time it's gotten even better. In fact, it's now probably my favorite photo-editing program of all time. The big new feature is that it works well on both Windows and Macs all at once. I use both a Mac and Windows laptop, and up to this point I've been using Lightroom on Windows while taking notes on my Mac.
