In this review, we will see if there are any significant improvements in Lightroom 5 over Lightroom 4. Since Lightroom 5 is still in beta, it's not perfect yet. One new feature related to Lightroom 5 that may be taken for granted is auto save. When working on photos and video files, you will certainly be using auto-save, sparingly, because of speed. Watching everything that you've done on a single photo and video is pretty hard on the eyes. That's why Lightroom is one of the more buggy apps, especially when used with long sessions of intense editing. The automatic save feature is a noticeable improvement and a useful one because it allows you to finish your work quickly and return to it later. It is also very helpful when making changes to a project that you want to save back to the main catalog at the end of the session. If you just use Lightroom as a seemingly more coherent cataloging tool, then the changes in Lightroom 5 hardly matter to you. But if you have taken the time to learn the application, Lightroom 5 will make some changes that affect your workflow. One such improvement is Lightroom's new ability to repair missing data. I found this feature to be pretty useful for extended periods of time with a photo that blew up an inch or two on the sides. Sure, I could have duplicated the photo and applied the crop to the copy and then saved the image and reopened the file in Lightroom, but that would be a lot of effort for a relatively small change. Why bother? Lightroom 5 gives me a live view of the entire photo stretched to fit a certain aspect ratio. I can fix any aspect ratios in the restored photo.
