(x64) + Patch View more: Category:Windows software[Comparison of 4 commercial kits for serological diagnosis of toxoplasmosis]. *Toxoplasma gondii* is an important protozoan parasite and causes severe infection in human. The serological diagnosis of toxoplasmosis is mainly based on detection of IgM and IgG anti-*Toxoplasma gondii* antibodies. The purpose of this study was to compare four commercial kits for detection of anti-*Toxoplasma* antibodies. The four kits include enzyme-linked immunosorbent assay kits, Toxo-Screen ELISA (Abbott Laboratories), Toxo-Screen Elite (ImmuneGistics Inc.), and Toxo-Screen EIA (Virion/Serion GmbH). We compared the serological titers of these four kits using the results of ELISA by competitive ELISA. The ability of the four kits to measure IgM and IgG antibodies and evaluated the presence of IgM and IgG antibodies in 56 IgM/IgG-negative and 88 IgM/IgG-positive sera obtained from infected human subjects by Western blot. All kits could detect IgM and IgG antibodies. The most sensitive and accurate kit among four kits was Toxo-Screen ELISA. Toxo-Screen ELISA can be used to the detection of both IgM and IgG antibodies. We evaluated the presence of IgM and IgG antibodies in IgM/IgG-negative and IgM/IgG-positive samples by Western blot. The advantage of the kit should be well understood before choosing the appropriate kit for the use of this technique. The kit which exhibits the highest sensitivity and accuracy would be a good choice. Brain Inflammation and Dying Cells Promote Memantine-Mediated Protection Against Status Epilepticus: A Role for Membrane Melanin. Spontaneous recurrent seizures occur in 20-30% of patients with epilepsy. Recurrent seizures can induce an inflammatory response in the brain. Hyperpolarization-activated cyclic nucleotide-gated (HCN) channels act as endogenous neuronal brakes and the HCN2 channel is highly expressed in the brain. Memantine, an N-methyl-D-aspartate (NMDA) receptor antagonist, is widely used in the treatment of Alzheimer's disease and has been shown to have neuroprotective effects in animal models of Alzheimer's disease.
