Passper for RAR is a simple decrypting program with a very intuitive interface; simply add a RAR archive and give it a go. According to its developers, the application has a 95% chance of cracking the code with one of its four methods of attack. The first method is called a combination attack, and it involves you choosing certain characters in hope that the program will rearrange them until it gets the password right. Naturally, you should use this method only if you remember a few characters from your lost password. The second method is called a dictionary attack; the program will keep trying to unlock the archive using various words from a dictionary, in hopes that one of them matches. The third method is the mask attack, which again involves you feeding the program clues, such as password length, types of characters, prefix and suffix. The brute force attack is the final method; it will try all possible combinations, but it will take longer. The program will then present you with a list of options for you to choose from. Just choose the one you're most comfortable with, and your RAR password will be revealed! ... www.passp... www.passp... www.passp...
