## Review 4 for ThinkVantage System Migration Assistant (SMA)

Just fine Posted:October 12, 2012 by VMOcean I migrated a Lenovo desktop to a new system and the process was easy. It works well and I am satisfied with the program. There are a few things that are less than optimal. First, when you are starting the system migration, there is a message to say that a program named "cdboot" is installed on your

system. It may not be

This program includes: user settings personal information music videos photographs search

settings default applications  
customisation and  
personalisation settings e-mails  
exporting and importing  
functions installing software  
system migration assistant is  
available for download from the  
lenovo website. it has a user  
rating of and a high general  
rating of. the program runs on  
windows. it has been scanned  
for viruses by various antivirus  
programs and has been found to  
be virus and malware free.Q:  
Swing "move" does not work  
when removing a component

I've searched and did not find an answer for this. I have an application, that displays a JPanel with some controls on it. If I use the remove component function, I am getting no error, but the control does not change its position. I could simply set the position, but I am curious to understand why it does not change after remove. I need it to be able to move the component from the position where I move it, or remove it, and then re-add it from the position. The remove component() function is called

```
like this: private void  
removeControl(Component c) {  
c.remove(); } The update()  
function: public void update() {  
String[] l = { "home",  
"home/main", "games",  
"games/main", "help",  
"help/main", "language",  
"language/main", "logout",  
"logout/main", "signup",  
"signup/main" }; JPanel lc = new
```
