THBPdf Crack + Keygen

 KEYMACRO is a command line batch utility to create a new PDF document from a directory. To create a PDF document you just have to call the command line tool with the name of the PDF file and you are done. The content of the directory gets stored in the PDF document with all pictures already compressed and the correct page size. To make a PDF document from a directory you have to call the command line tool with the name of the directory and you are done. If the directory contains multiple PDF documents you can choose them by giving the full path of the files and the command line tool will create all PDF documents it finds in the given directory. If the directory contains images you have to pass all images with the tiff extension to the command line tool. You can add a special keyword MACRO to tell the command line tool to extract the images before processing them. The command line tool can be used to create PDF documents from all common image file types like Gif, Tiff, Jpeg, Jpeg2000, Jbig2, PCX, TGA, PSD,. The command line tool will also create PDF documents from scanned images and objects from other PDF documents. Keymacro has its own integrated PDF viewer for previewing the PDF documents created by the command line tool. The command line tool outputs a log file with the created PDF documents that is useful for debugging. The command line tool can create all common metadata items like Author, Keywords, Title and more. Macros can be added to create interesting output for the PDF document or to create a PDF file which has unique features like additional encryption, printing or archival. The command line tool can create PDF files from pages of all types of documents like word files, Excel spreadsheets and many more. If you want to create PDF files from a specific type of document you have to pass the file type as the first argument to the command line tool. The images created by the command line tool get stored into the PDF document with all other pictures and this means that you can later use the created images in other PDF documents. You can also pass a folder to the command line tool in order to extract all pictures from the folder and store them into a PDF document. Key 2edc1e01e8
