In fact, you will need to use the standalone version for the following year unless you upgrade to a newer version, which is usually free. If you run the standalone version, you can make use of the AI. The most populous Android phone is the Samsung Galaxy S8, which according to IDC has a 2.06 percentage market share. Though it's not the world's most popular Android phone, as the tech giant boasts the top spot, it is the main smartphone for three in every five Americans, and a distant second place to Apple's iPhone at 33% market share. The native Stickers app that Microsoft's Cortana voice-enabled digital assistant baked into Windows 10 and subsequent Windows Insider builds has been replaced with its Instagram Stickers in the new Camera app for Windows PCs. Photos taken with the new Camera app will no longer include the sticker overlay, however developers will be able to use the new API available in Windows 10 build 19102 on PCs to build custom sticker filters for Photos. The iPhone X has a larger display than most Android phones, which forces many Android phone makers to use cumbersome cut-and-paste methods of changing the resolution of photos they upload. The iPhone X's screen is an 8-inch display with a resolution of 2,688 x 1,242 pixels, making it 4 inches larger than the full HD displays of most smartphones. So it's understandable that Apple wanted to discourage lower quality phone photos because of the smaller screen sizes most Android phones come with.
