Steels and Nickel Fasteners | British Standards The National Institute of Materials, Metals and Mining (NIMMM) is one of three National Centers in the United States for testing the tensile strength and ultimate tensile strength of metal fasteners. The NIMMM Technical Center performed the testing in this study and the results were compared to the test data published in the British Standards. - Normal Service - Detailed Service - Parts Inserted - Parts Description: The information given in this publication is for information only and does not constitute any endorsement or recommendation by the National Institute of Materials, Metals and Mining (NIMMM) of the safety, health or effectiveness of these alloys. For a full description of the I.S. EN 10269:2012 in its present form, please refer to the original publication: I.S. EN 10269. Other similar proprietary materials codes have also been proposed by other national standards bodies. 10269 Steels and Nickel Alloys for Fasteners with Specified Elevated and/or Low Temperature Properties [EN ISO 3506:2007][EN ISO 3506:2007] Steels and nickel alloys for screws and nuts [BRITISH STANDARD BS EN ISO 3506:2004] Steels and nickel alloys for screws and nuts [English Language Version] [Access to this Site is hereby granted. / [login to view URL] 1222 2950.2 1.E [Principal Investigator] 2.EU NISO10269 Steels and Nickel for Fasteners with Specified Elevated and/or Low Temperature Properties [EN ISO 3506:2009][EN ISO 3506:2007] 3.
