The simple idea of icons-land.com is to provide quality and professionally created Vista style software icons for your free use and download. The aim of this site is to provide high quality icons for use with Windows Vista or XP operating systems. By downloading icons-land.com software icons you agree to use them for your personal use only and not for commercial purposes. We also ask that you do not re-distribute icons-land.com icons without our permission. All icons are vector based and will work in any computer or software program. Icons Land software is an expansion to the software icons I have been creating for a long time for other Windows applications such as tools, ribbons, menus, charts and so on. I have taken a more professional approach with the Vista software icons by adding proper drop shadows, rounded edges, glossy, and semi-gloss surfaces for the objects. The icon sets are provided in formats such as DXF, PSD and ICO. I have provided the icons in both English and Spanish. All icons have an Alpha transparency, so if you are using software with any form of layers you can move and resize the icons without distortion. Icons Land software is intended for free use. If you decide to purchase a license for icons, you can download them in a ZIP file or simply email me for a direct download. Currently I am working on more software icons sets and will be posting them as soon as possible. For example I have several dozen ribbons and tools that will be provided to the public later this year. Feel free to ask any questions or send me a note. Using the icons from Icons-Land is very easy. Simply open your image editing application and then place the icon in the desired location. No additional steps or complexities are required. Icons for the following applications will be added as soon as possible. The National Safety Council has asked the federal government to roll back the rollback, an action that likely will face court challenges. The group's Executive Director Peter McCloskey says the number of truck crashes could drop by one-third if the regulation was reinstated. "For the trucking industry, if we see that the regulations get lifted, and get lifted properly, there's going to be a lot more drivers being on the road, and a lot more trucks on the road, and a lot more economic activity." McCloskey says the trucking industry has not been asked to make changes to its big rigs, but will need to if the regulation is reinstated.Q:
