You can merge, split, remove layers, and use a variety of blending modes to create a customized image. For different purposes, you can also use layers to select a part of an image and adjust it. Enhance the quality of your images with the help of Image Optimization feature. Image Optimization will help you to improve the quality of an image by removing grayscale and noise. You can also reduce the color noise or sharpening aberrations by using noise reduction tools. You can define the automatic Sharpen tool to create depth and contrast in images. The Black

& White Conversion tool lets you quickly convert any part of the image into a black-and-white format. It's useful when you want to emphasize the main subject of the image. Adobe also brings you the option to layer your photographs and videos – this is a great tool to create multi-image collages. With the help of Photoshop filters, you can add animation for videos. There are different tools for adjusting the animation and creating more professional videos. **Sampling** - This tool is being tested with time that gives you a simple ability to create and edit texture, brick, concrete, text, and other elements. You can make them with different names, shapes, and their displacement, and can change their presentation rule. It will remove the hassle of using a raster or vector image. Just create a selection and paste the texture you want. From there, create different layers with different color blending, outline, curves and fill options, and add other features as you like. Take a look at this video to see the lesson in a simple way: **Sampling Tool Tutorial** YouTube .

The left and right panning tools, which you can access via the tool bar (or the Perspective tool on the View menu), let you move the selection in a precise manner. You can also access small selections (up to 65,535 pixels per inch) using this tool. The duplicated layers or Smart Objects features of Photoshop are lightweight copies of a layer or image. Because duplicated layers work as normal layers, you can edit the layer masks, and they'll apply to the original as well. Adobe is paving the way to developers with a set of motion builders that enable designers to more easily build their own point-and-click apps. 2019 is the year of apps, and we can expect more professional-grade apps in future versions of design software. Right now, Adobe's motion builders will be able to create apps that are simple to use and have all the right components, including the ability to use built-in motion. The new AI-powered feature that Photoshop can use to help designers correct images is called the Adobe Sensei. It's basically an intelligent digital assistant and machine learning tool that helps designers quickly and easily correct defects in photos. In Adobe Camera RAW (ACR), the name for the new AI-powered feature is Camera Calibration feature. The new feature can bring brilliant results by using professional photos taken with different types of cameras, such as smartphones. The new feature carries the capability to identify the type of camera that was used, then select the right settings and automatically adjust to produce the best photo possible.
