Lightroom 5 can be a standalone package, and it works great, especially as a backup program, providing you with many of the same features as in the full version. An upgrade can even be provided for existing Lightroom users. There are some limitations, however, in making on-the-fly adjustments to RAW photos, as well as a lack of useful features with smaller and even larger collections. The new Design & Edit panel holds all of the tools that new and experienced photographers are likely to use. In addition, it provides a good feature called Live Tile, which makes the panel look like a tile in a Windows 8 window. It's nicely done. Lightroom 5 is easily worth the money. It's less expensive than Photoshop CC, which is similar to Lightroom 5 in that it is free to download but requires a paid subscription. (Adobe Photoshop CC 2016 required an annual subscription of \$50 to \$72, more for macOS users.) I will forever recommend Adobe Photoshop to you all. It is a very robust and versatile piece of work. I love all the different features that it has and I know that the user base will keep growing as time goes on. I do have a few suggestions for you all. I would like to know how it would be possible to more easily use the brush roll. I would love for it to be a drag and drop workspace so that you could just drag and drop your brushes onto the roll instead of doing it the current way. Many users get frustrated doing this because it takes the location of the roll as well as the size. I know that my suggestion does seem like a very simple one but it is honestly all that can be asked for in the program. It seems to be a primary gripe I have heard about the program. One more thing in this section would be that when you change the size of a brush it seems to only resize the perspective of it in a way that it gets rounded or maybe stretched. I would like to see that fixed. You can't seem to drag when you change the size of brushes. That would go a long way in making the program a better one.
