One of the first things you notice when you use Lightroom is how much faster it is than most of the built-in image editing apps from Apple. In fact, Lightroom has almost no noticeable delay in editing, even if you decide to perform a complex task like batch Rename. But my tests suggest that with expanded functionality, increased functionality and large file sizes, Lightroom 6 may not be as time-efficient as the predecessor. And it does lack some of the features of the more advanced application like Retouch Grid and Content-Aware Patching. The comparison with the latest version of Photoshop is no straightforward task, however, because the only running editor is Pixelmator Pro (which I do not recommend), though in general, Lightroom and Photoshop should perform similarly in most tasks, except for large files with extensive edits. Now it is possible to remove the Rug Burn or Trim function with the latest version of Lightroom. This apparently performed well in private tests performed for this review. As I did not find any other non-destructive way to do it, I believe that this should be added to Lightroom, because I am always ready to convert my images to DNG. If there were an easy way to do it in Lightroom 5, however, it would be even better. **ABOVE:** A set of images created by a digital artist on the iPad Pro with the Apple Pencil, with graphics created in Adobe Photoshop Sketch, using the Pencil to draw simple shapes. The solution for me is to automate the process. You can do so with presets. A preset contains a set of operation settings that you can quickly switch to at any time for developing a particular task.

Fortunately, Adobe have released this tool Adobe Photography Suite (APS) which allows both applications to be used simultaneously. However, Adobe has not put a stop to Photoshop, but they have added a few new tools to the program. They're also introducing update events for Photoshop now. For example, a new version of Photoshop is released every six weeks; updates are called "service packs". It's possible to upgrade an earlier version of Photoshop to the latest version by downloading a patch. Adobe has also added a feature called "Save For Web & Devices".
