Adobe's Microsoft Paint seems to be getting weaker year after year, but fortunately, there's room for improvement where this venerable application is concerned. While we do not have the best autofill and column options, there is one place where Paint can improve. That is in D: drive support for autofill, and even in saving files to an external drive. Taking a cue from smartphones, it is now easier than ever to use Paint for freehand sketching. Finally, there is the ability to save files in the PPT and PPS formats, and allow users to print to PDFs. While not perfect, there is no denying that Paint is heading for places that can be beneficial to users in the long run. Previously, I thought I had to give the real-time editing tools a chance before adopting. While the sliders may be initially surprising to older users, it actually is easier to spot how creative one can be with instagram if one has never done it before. Previously, I would often load up instagram, and then edit and post a new photo, often a simple landscape or cityscape. While this worked, I would often be disappointed with the results, as I'd often have to crop once or twice, and once I had the photo just the way I wanted, I'd have to try to find a photo to use on the internet, usually another that was a landscape, and crop it for myself, which usually would not create the out-of-this-world result I had in mind.

Adobe Creative Suite 6 customers, as well as people who download Adobe Photoshop from the Mac App Store, have always been able to use Apple's iPhoto application in virtual circumstance to make adjustments to their shots. Adobe Photoshop for iOS makes the same adjustment logic and processing available on a mobile platform. Users can make the same selections they made on their desktop counterparts in images on phones and tablets from the hardware-accelerated motion graphics through the extended post-crane photography. Apple has also developed a powerful new feature called zoom and magicwand that brings the Mac version's Retina display into the palm of your hand. With it, you can zoom in to 100 times magnification on the fly. You can make luminance adjustments to the photo and even preview effects on different areas of the image without using any hardware acceleration. This keeps the photo looking sharp at all times and prevents the phone or tablet from getting hot from the task as video is often recorded in mobile. If you subscribe to Adobe Creative Cloud, you can use any of the features and security updates, even if you're running Pro, Standard or Touch products from other years. There's even a software installer for users who purchase Adobe Creative Suite 6 or later at a retail location. You can also use the Adobe Trade-Up Program, which helps you transition to a new Creative Cloud subscription at a reduced cost. You can also get these products with a 90-day trail at the Mac App Store, which gives you some of the features of an annual subscription before you buy.
