Fortunately, I've been able to open a Lightroom 4.7 library successfully on my Mac. There are many good reasons why Adobe Camera Raw has been updated more often than Photoshop. Adobe Camera Raw works right out of the box with Canon's EOS-3 line of DSLRs, Nikon's D300S, and Canon's EOS-1D Mark II, a 35-megapixel beast by current standards. This adds a lot of value for photographers who have switched away from film to digital. I've always found it strange that the update process isn't as speedy with Photoshop, but once you get off the free trial it never feels hard enough to abandon. If you're not going to get Adobe Creative Suite, I think that the upgrade program is well worth it for photographers. Over the years, Adobe has continued to fine tune Photoshop's interface for the benefit of photographers. Photoshop is targeted far more toward professionals who need to create complex artwork than it is for casual users who want extensive control over their images. As a result, you have to dig deep to find things like crop tools within Photoshop. Regardless, I find it impressive that Photoshop's interface is so tightly integrated into Lightroom. You can close out Lightroom with a left-click on the Photoshop icon on the taskbar, and you're almost immediately dropped into a specific toolbar and a viewer to view your images. From there, it's just a matter of pressing a keyboard shortcut and choosing your type of edits.
