Digital cameras are still heavily used by people. This is the category traditionally dominated by Canon, and for this reason Canon has much better camera performance in CorelDRAW than it does in Photoshop. However, there are other parameters at play here. I noted that in Photoshop, work time usually wasted on image scale, resizing, cropping, and rotating. This is not so with CorelDRAW. The main application I use for Mac, especially for more advanced work, is the free version of CorelDRAW Studios. It works with both Windows and Mac and is completely freeware. For the best results, I'd also use CorelDRAW. For more about using CorelDRAW, I wrote a brief article: First impressions: If you're a Photoshop user, you'll want to do whatever it takes to get the most out of it. This app is not as intuitive as other Adobe programs might be. In some cases, that's a good thing because I don't expect it to be, but in others it probably would have been better if it were more obvious. I've ported some of my typical tasks to the application and it makes sense to me—it feels natural to do so. (And it's nice. And I keep using it because I like it.) But the two things I particularly want to address that aren't a part of this review are: a smart object tool that lets you easily create a standalone object that you can interact with; and a collection or library feature that allows you to save your favorite collections. Smart Objects are clearly the most useful Auto Enhance feature and their tool is somewhat similar to one in Photoshop when you think of the Photoshop Editor as a Series of Panel Items opened in layers. The Photoshop editor is accessed by selecting Layer Properties from the right-mouse-click context menu. And, of course, for those who have asked about that, the integrated version of Photoshop Lightroom can do this, too.
