Wow now when does Apple Pencil and Apple Keyboard work with Pixelmator Pro? I will say that until using the Apple Pencil, truly working a tablet or iPad has been a nightmare. So I was a little surprised to see that a combination of both Apple Pencil and Apple Keyboard worked without any problems when adding barcodes to a project in Pixelmator 2018 Release Notes. I'm just playing around with a new MacBook Pro (2019) before I purchase one but so far I've not heard about the Apple Pencil working. In fact, Apple is often very quiet about pencil pointing and I see little of that in Pixelmator. But notice that in Pixelmator 2018 Release Notes, a note on using the Apple Pencil with Pixelmator Pro is made. Perhaps the Apple Pencil will work in Pixelmator Pro. I just want to say that I was at the Apple Pencil demo at WWDC and I was using Pixelmator Pro 2018 on a MacBook Pro. It was incredible for what it is. I just can't pass up on this amazing progression. It is super easy and the learning curve is super simple.

This is Pixelmator 2018 at work.

High res and low res workspaces.

Easy to customize.

Awesome textures.

Smart layers.

You have achieved a perfect balance of ease of use and power. Pixelmator is my go to photo editing tool and I am using it to edit one of my wedding photos right now. It is very simple to use and I haven't run into any problems with soft spots and I am very pleased with it. Websites that use Adobe's suite of products will work just fine when switching between browser tabs. When you revisit a web page, hold down 'Option' and select another tab. This will reduce website loading times and give Photoshop some breathing time.

I am downloading the 32-bit version of Photoshop CS6 Master Collection. I have it installed on my Windows laptop, but I have not tested it yet.
